

Ultra Absorbent Mats with Laminated Backing

DeRoyal now offers a premium absorbent mat that is made of super absorbent polymers for heavy fluid control, that contains up to 60% recycled content with pliable fibers for folding and easy storage, and absorbs liters of fluid for a very market relevant price. This product comes folded in an individual poly bag for ease of use and efficient storage. The DeRoyal Charcoal Absorbent Mats help keep fluid from ever hitting the floor to address slip and fall incidents. Plus the new highly absorbent mats have a laminated bottom for mitigating the possibility of fluid contact to the floor and staining due to use of prep products, i.e. Betadine. This product is ideal for high fluid cases for quick absorption of excess fluid and allowing for faster OR turnaround.

Ultra Absorbent Mats with Laminated Backing
